

Use Case: Hazardous Chemicals Cleanup

Higher Efficiency and Savings with Workforce Manager

With the well-being of residents front of mind, this company specializes in the disposal of hazardous waste materials.

Challenges

Safety and accountability are both huge concerns for this company. Since they deal with dangerous materials daily, accountability and accuracy are crucial to making sure everything goes smoothly. Managers had an issue with timekeeping and needed an accurate way to track when employees were on the clock. There was also a concern about employees' productivity once they were on the clock.

Solution

Workforce Manager was the solution this company needed. The GPS Tracking feature led to an immediate increase in accountability, ensuring workers were on-site whenever they clocked in. And Wireless Forms were implemented to

give them an easy means of tracking every task they're completing during the week.

Benefits

Since implementing our solution, efficiency increased by 30 percent and resulted in thousands of dollars saved. In particular, they're able to reduce unwarranted overtime and payroll processing expenses, since locations are tracked and payments are automated. Reports make it easier to check which employees worked on each customer site and how much time was spent at each site, which further helps sort out potential discrepancies. Management knows if workers clock in before arriving at the worksite or clock out after leaving, in an attempt to increase their hours. Employees are held to a higher standard today and they have stepped up their productivity since our solution came into the picture.
